

NEW!

INTRODUCING THE ALL-NEW ERB-800™

For over 35 years, Hurco Technologies, Inc. has brought many new products and innovations to the municipal sewer and water industry. Our products can be found in specifications across the country and around the world. Our edge has always been our fresh and innovative look at processes and designs. We are proud of the fact that our competition, some who have been around for decades, take our innovative designs and build similar products. To us, this is the greatest form of flattery.

Built to Last

Hurco products are built to last. Using high strength steels and subjecting our products to tough testing at independent structural engineering laboratories, mean you are getting quality and reliability. Hurco is so confident in its Spin Doctor boom, that we are the only manufacturer that offers a Life Time Warranty on our boom against failure due to the torque applied when exercising those tough valves. That's confidence in our processes and designs!

Innovation

Hurco offers municipalities, utilities and contractors a full line of equipment to test and repair sewer and water lines. Most of these tools are innovations of Hurco and covered by several Patents or other Patents Pending. Reliability and innovation has always been our reputation and we have never sacrificed safety in any of our designs. Hurco

is proud of its safety record, not one single liability claim in our entire history.

A Commitment to Improvement

Hurco is proud of its history of listening to our customers and adapting our process and equipment to meet their demands. After all, who knows what is required in the field better than that person who is there every day. We will continue to listen to you and will never compromise customer satisfaction to save money. As part of this commitment, Hurco is excited to announce another new option for the Spin Doctor family of valve exercisers. The new Spin Doctor ERB-800 offers features and quality unmatched by the competition.

Customizable Flexibility

You name it, we can do it! Our Spin Doctor systems can be configured to meet any of your requirements. We have a basic list of accessories and configurations, but the sky is the limit on what we can do to meet your demands.

ERB-800

EXTENDED-REACH

Prior to the ERB-800, horizontal boom designs just didn't give you the same flexibility that was standard with our Spin Doctor family of valve exercisers. No matter how you spin it, the Spin Doctor gives you flexibility, strength and unparalleled capability. This new boom is covered by one or more US Patents and other Patents Pending.

The Competition

Some competitor's designs require a clumsy u-joint connection from the head of the exerciser to the valve wrench – at best, a very crude connection that can fail in time. The reason for this u-joint connection is to compensate for the inflexibility of their boom design. This design requires the operator to get under the valve exerciser head to make a connection. Because there is no vertical adjustment to the boom, the valve exerciser must be on reasonably level ground. When on a very difficult valve, the competitions valve wrench can slip up and jump off the valve when under torque. The ability to reach over an obstruction or down into a road ditch are very limited. Design without flexibility is meaningless if the valve exerciser cannot reach the valve or be easily connected to the valve.

The Spin Doctor ERB-800 works on a primary horizontal axis with a vertical lift in the second arm.

Hurco's Extended Reach

Hurco invented the Extended Reach, articulated boom, valve exerciser. Our design is so unique that it is covered under several

locking disk brake system, we can control placement of the valve exerciser with greater ease than the competition. The new ERB-800 not only gives you more torque than the competitions boom exerciser, but we give you

US Patents and other Patents Pending. The Hurco ERB-800 allows a single operator to quickly and easily reach and turn any valve. With 13.5 feet of horizontal reach and vertical capability, we can reach valves in areas that the competition can only dream of. With an independent

Covered by one or more of the following patents – 7,334,606 – 7,376,529 – 7,415,376 - 7,455,124 and other patents pending.

-8000™

WITH FLEXIBILITY

the speed you need when working on large gear operated valves. The competition uses a gearbox which can give you torque but sacrifices speed. Hurco's ERB-800 operates at 0 to 60 RPM with torque capability of 950 ft. lbs intermittent and 800 ft. lbs continuous.

Patented Innovations

Hurco is proud of the patents it has acquired over the years. Some of these patents give us capabilities that are unmatched by the competition. Only Valve Star offers you audible and visual alarms for torque, speed and revolution count. Only Hurco offers Patented GPS capability at the head of the exerciser while you exercise the valve. These are just a couple of the important capabilities Hurco has Patents on. Hurco also has Patents Pending on

Spin Doctor Flexibility

The Spin Doctor family of valve exercisers gives you a choice based on your valve exercising needs. Our standard Spin Doctor 400 is a simple design that will handle any valve requiring 400 ft. lbs or less. This will include nearly every valve made. Easy installation makes the Spin Doctor 400 economical. Simply slip the Spin Doctor 400 into the hitch receiver on any standard pickup and go to work. Competitive models require major modifications, special parts for installation and their inbox design wastes valuable storage space. When you are

tough valve, the Spin Doctor's locking shocks will hold firmly eliminating the valve wrench from jumping off the valve. The competition's valve wrench can slip up and jump off the valve. Manufactured with Chrome Moly steel, you can rest assured that you will get years of reliable service and dependability and only Hurco offers a limited Life Time Warranty. This is another example of Hurco not sparing expense to bring you the best. The competition does not offer this expensive option on their valve exerciser.

The new Spin Doctor ERB-800 uses the same quality features as the Spin Doctor Chrome Moly 800 except it

its new auto shut down at set torque feature while in computer mode or in manual mode. That means when your computer fails, you still have auto shutdown capability at set torque. The competition doesn't have it! We also have additional Patents Pending on our boom design.

done with the Spin Doctor, just pull it out of the receiver and store it. Simply put, you don't need a special dedicated truck when using the Spin Doctor.

The Spin Doctor Chrome Moly 800 is a rugged and robust valve exerciser that is also easily installed in your pickup receiver. When you are on a

works on a primary horizontal axis with a vertical lift in the second arm. The second arm is hydraulically operated eliminating any lifting by the operator. This special feature virtually eliminates the valve wrench from jumping off the valve and gives you reach capability that is unmatched in the industry. The competition only has horizontal movement which limits its flexibility and with Spin Doctors pivoting head, a u-joint is not required.

ERB-800™

Exercise valves quickly with the new ERB-800.

The new Spin Doctor ERB-800 offers features and quality unmatched by the competition.

All of these Spin Doctor models can be mounted on our Mini-BMT trailer, our Valve & Vac system, or any standard pickup. Our Valve & Vac models are skid mounted so they can also be mounted on your truck as a permanent system.

With these options, you can choose the right tool for the job. No matter what your requirements are, Spin Doctor will meet your demands.
